

## Company Facts

### Mission

Combine renewable energy resources to make reliable, efficient “out of the box” systems. DirectNu Energy products are designed for easy, economical assembly, with added intelligence for worldwide appeal.

- Creating Intelligent systems with higher value than individual components
- Lowering high cost of installation and expertise needed
- Portable, on-off grid systems, with ease of expansion
- Modulated design for system reliability and open platform
- Creating and changing local economies with the use of Green Energy, produced locally cleaning the environment, and creating meaningful-sustainable jobs

### Who We Are

DirectNu Energy Corporation develops renewable energy systems with advanced integrated technology to store and manage wind, solar and electric energy. The company, founded in 2009, is headquartered in San Jose, California with global sales, manufacturing and distribution centers in the United States, Europe and Asia.

### SNAPSHOT

- Located in Silicon Valley, California
- Global provider of clean energy products
- Management combines more than 100 years experience

### PRODUCTS

DirectNu Energy products are designed to supplement the electric utility usage with self-sufficient energy systems, which help to significantly reduce the carbon footprint of businesses and government entities.

## Accomplishments

Strategic partnership with Panasonic to develop and install electric vehicle charging stations on Panasonic properties in North America and Europe

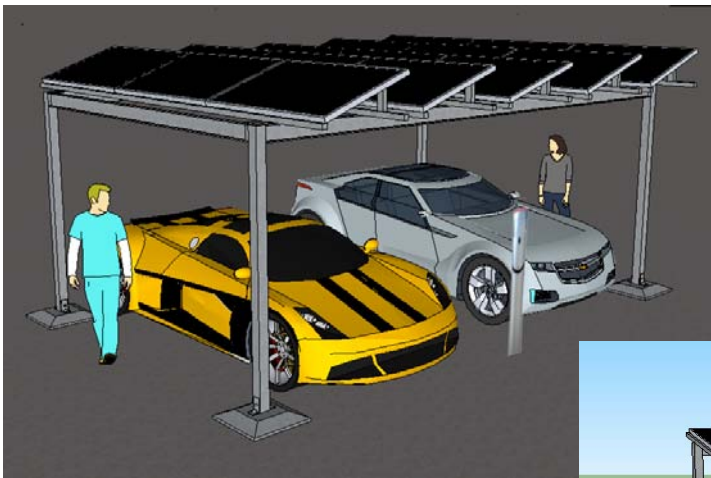

Strategic partnership with Ensto to become the exclusive distributor of electric car charging stations in the United States

Installed the first wind and solar powered street light in a City of Turlock park creating a safer neighborhood with additional pedestrian lighting and reducing energy costs

Three US patents filed in the field of solar energy collection, unique carport components and a Smart Cable for Electric Vehicles

## HIGHLIGHT PRODUCTS

- Solar Carport Canopies
- Electronic Vehicle Charging Stations
- Hybrid Wind and Solar Powered Streetlights
- High-performance Wind Turbines
